SUMMARY

Full-stack software engineer with experience building production applications using Java, Spring Boot, React, TypeScript, Python, and SQL. NJIT Computer Science graduate with fintech and healthcare internship experience, hands-on AWS deployment experience, and a first-place capstone award.

EDUCATION

NEW JERSEY INSTITUTE OF TECHNOLOGY (NJIT) Newark, NJ

Bachelor of Science in Computer Science Jan 2023 - Dec 2025

- Awards: 1st Place, Ying Wu College of Computing Capstone Showcase (Fall 2025)

EXPERIENCE

Cambridge Associates Remote/Boston, MA

Full Stack Software Engineer Intern & Co-op June 2024 - Dec 2024

Global investment firm providing portfolio management and analytics for institutional clients

- Powered a client portal for **1,300+ global clients** with high-throughput Spring Boot REST APIs and React/TypeScript
- Built **10 new production features** and **resolved 25+ bugs**, expanding portal functionality and improving reliability
- Implemented cross-page React state filtering to sync portfolio views, **boosting engagement ~20%**
- Diagnosed and resolved complex React state-management bugs, including stale closures causing incorrect real-time data, ensuring accurate portfolio views for clients
- Contributed to automated testing and CI/CD deployment pipelines in **Agile sprints**; **gained AWS (EC2, S3) exposure** through cloud migration planning

Medtronic North Haven, CT

Backend Engineer Intern May 2023 - Aug 2023

Global medical device company supporting regulated manufacturing and data-driven operations

- Automated manual database updates via a Python/SQLAlchemy pipeline, reducing execution from **~20 min to seconds**
- Optimized preprocessing and batch operations using **pandas, NumPy, and SQLAlchemy**, saving **~$65K annually**
- Normalized large relational datasets, optimized queries via **SQLAlchemy ORM & pyodbc**, boosting efficiency **~20%**
- Built **robust validation and error-handling logic** to enforce data integrity, reducing data inconsistencies by **~10%**
- Designed **Power BI dashboards** for plant leadership and engineering managers to monitor production trends and costs

PROJECTS

C++ Interpreter/Compiler Nov 2023 - Dec 2023

- Built a C++ interpreter for a custom Pascal-like language (lexer, recursive descent parser, AST evaluator) with 4 value types, 7 constructs, and line-numbered error reporting
- Compiled to WebAssembly (Emscripten); deployed a browser IDE with Monaco Editor on GitHub Pages, zero backend

B The Cause – Global Case Manager Dashboard Sept 2025 - Dec 2025

- Built a full-stack **Laravel, Vue, Tailwind** platform with **REST APIs** for global case, task, and alert workflows
- Modeled and migrated a **MariaDB** schema with seeders and versioned migrations to support production data growth
- Implemented **role-based access control** and secure authentication to enforce permissions across multiple user roles
- Engineered prompts for **OpenAI API integration** to auto-generate case summaries, reducing manual review time
- Containerized the application using **Docker & Laravel Sail** to standardize development and onboarding environments

NJIT Schedule Generator Oct 2026

- Developed a **React + Flask** app that generates conflict-free weekly schedules from course selections and availability, using a Selenium/CSV pipeline to load **5,321 sections** into **MySQL**
- Built Flask **REST APIs** and a MySQL schema with validation; improved schedule **accuracy by 25%** through preference filtering
- Deployed on **AWS**: React SPA on **S3** behind **CloudFront**, **Flask/Gunicorn API on EC2** under systemd, and MySQL on **RDS** with security-group-restricted access
- Fixed HTTPS mixed-content errors by fronting the API with a second CloudFront distribution; used an **IAM** user instead of root and **AWS Budgets** alerts

TECHNICAL SKILLS

Programming Languages: Java, Python, C, C++, JavaScript, TypeScript, SQL, Bash, HTML/CSS
Frameworks & Tools: Spring Boot, Flask, React, Docker, Git, Jira, Bitbucket, Power BI, Postman,
Cloud & Database: AWS (EC2, RDS, S3, CloudFront, VPC/Security Groups, IAM), MySQL, PostgreSQL, MongoDB, Linux
